01

Pick 1 city.
Pick 1 platform.

Don't go "all-India, all apps" on day one. Start where your product already sells best, and learn there first.

02

Fix the listing before the ads.

Main image readable on a small phone. Price per unit clear. 3–4 bullet benefits.

Ads can't save a weak listing.

03

Stock before spend.

An ad pointing to a dark store that's out of stock is money thrown away.

Check availability pin code by pin code.

04

Bid on category searches, not just your brand.

People type "protein bar", not your brand name. That's where new customers come from.

05

Measure orders per day, per city.

Not impressions. Not just the ROAS on the platform dashboard.

Count real orders, city by city.

06

Run it 3–4 weeks. Then decide.

Quick commerce runs on repeat buyers.
Week 1 is never the full story.
